## ABSTRACT

An amino alcohol derivative represented by the following general formula (1) (for example, (±)-2-amino-5-[4-(3-benzyloxyphenylthio)-2-chlorophenyl]-2-methylpentane-1-ol) exhibits strong immunosuppressive effect while causing less side effects:

$$R_1 \xrightarrow{X} X \xrightarrow{R_3} NHR_4 R_6$$

$$(CH_2)n \xrightarrow{R_5} OR_7$$

$$(1)$$
